VOLTAGE RELAY

FVS TYPE

Easy setting, long life voltage relay
Easy to use new models are available

FEATURES

Easy setting by digital switches

Setting reference voltage can be easily set by DIP switches.
Setting voltage value can be set by digital switch of direct voltage and percent value and it prevents malfunction.

Conformed to B-402 standards

FVS has high noise withstand, voltage fluctuation and insulation performance.

Long life design

Life time is designed for about 13 years with consideration of heat influence.

LED lamp for operation monitor

Control power presence and operating condition can be easily checked by LED lamps.

Wide variety of control power

Standard 100 / 110V type and multi power 100 - 220V AC / DC type are available for control power.

New FVS-SS type

New FVS-SS type can monitor high voltage over 200V and minute voltage less than 300mV.
Over voltage and under voltage monitor functions are built-in one product and can be changed by DIP switches.
Setting value and resetting value can be set separately.

HOW TO ORDER

FVS - □ □□ - DC110

Basic type | Shape code | Circuit code | Control power voltage

STANDARD PRODUCTS

8 pin-voltage setting type

FVS-SSA-100/220

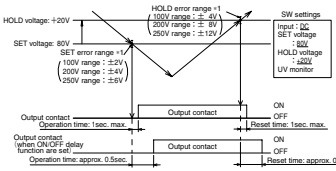
OV, UV select type

●**Accessory**

Socket	8PFA1	(Optional)
Voltage label	FVS V-NP-SSA	(Attached)

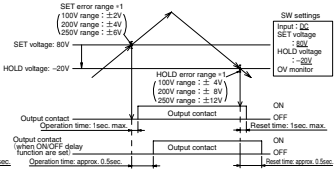
●**Operation chart**

Example1 : UV (Under Voltage) monitor SET voltage=80V DC, HOLD voltage +20V



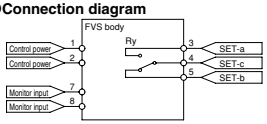
∗ The above chart shows a contact (NO contact) operation.

Example2 : OV(Over Voltage) monitor SET voltage=80V DC, HOLD voltage −20V



∗ The above chart shows a contact (NO contact) operation.

●**Connection diagram**



∗1 Error range of SET and HOLD shows the error towards absolute voltage values.
SET voltage 80V : 80V±2V
HOLD voltage +20V : 100V±4V
∗2 When SET voltage is less than 5V, the above error range is not applicable.
∗3 Please do not set SET voltage less than 8V for OV setting.

FVS-SSB-100/220

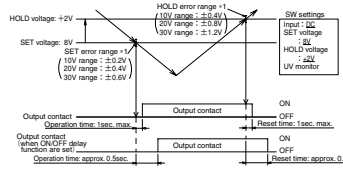
OV, UV select type

●**Accessory**

Socket	8PFA1	(Optional)
Voltage label	FVS V-NP-SSB	(Attached)

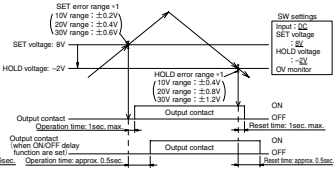
●**Operation chart**

Example1 : UV (Under Voltage) monitor SET voltage=8V DC, HOLD voltage +2V



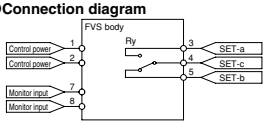
∗ The above chart shows a contact (NO contact) operation.

Example2 : OV(Over Voltage) monitor SET voltage=8V DC, HOLD voltage −2V



∗ The above chart shows a contact (NO contact) operation.

●**Connection diagram**



∗1 Error range of SET and HOLD shows the error towards absolute voltage values.
SET voltage 8V : 8V±0.2V
HOLD voltage +2V : 10V±0.4V
∗2 When SET voltage is less than 0.5V, the above error range is not applicable.
∗3 Please do not set SET voltage less than 0.8V for OV setting.

FVS-SSC-100/220

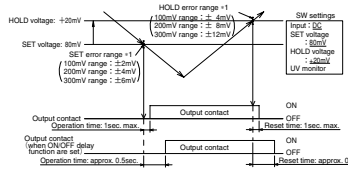
OV, UV select type

●**Accessory**

Socket	8PFA1	(Optional)
Voltage label	FVS V-NP-SSC	(Attached)

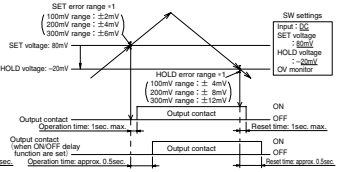
●**Operation chart**

Example1 : UV (Under Voltage) monitor SET voltage=80mV DC, HOLD voltage +20mV



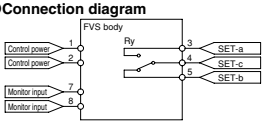
∗ The above chart shows a contact (NO contact) operation.

Example2 : OV(Over Voltage) monitor SET voltage=80mV DC, HOLD voltage −20mV



∗ The above chart shows a contact (NO contact) operation.

●**Connection diagram**



∗1 Error range of SET and HOLD shows the error towards absolute voltage values.
SET voltage 80mV : 80mV±2mV
HOLD voltage +20mV : 100mV±4mV
∗2 When SET voltage is less than 5mV, the above error range is not applicable.
∗3 Please do not set SET voltage less than 8mV for OV setting.

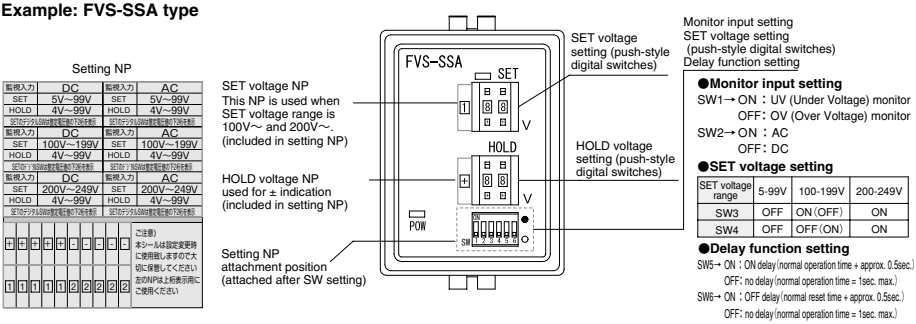
INSTRUCTIONS

■How to set monitor voltage (FVS-SS, voltage setting type)

Example: FVS-SSA type



1 . Monitor voltage style setting (UV or OV)

●Select monitor voltage style (UV or OV) by setting No.1 DIP switch.
●Set ON for UV monitor and set OFF for OV monitor.

2 . Monitor input setting

●Select monitor input (AC or DC) by setting No.2 DIP switch.
●Set ON for AC and set OFF for DC.

3 . Reference voltage range setting

●Select reference voltage range by setting NO.3 and 4 DIP switches.
●Set OFF both No.3 and 4 for range 5-99V, set ON No.3 and OFF No.4 for range 100-199V, set ON both No.3 and 4 for range 200-249V.
●Voltage range differ from each type. Refer to “DIP switch setting list” on the side of product bodies.

4 . Delay function setting

●Select delay functions for SET delay and HOLD delay by setting NO.5 and 6 DIP switches.
●Use delay function when operation time is delayed for 0.5sec.
●Set ON No.5 for setting SET delay function and set ON No.6 for setting HOLD delay function.

5 . Monitor voltage setting

●Set monitor voltage for UV or OV by setting upper digital switches, and set HOLD voltage by setting lower digital switches.
●HOLD voltage is over value from monitor voltage of UV or under value from monitor voltage of OV.

6 . Voltage label attachment

●Attach each NP for SET voltage, HOLD voltage polarity and each setting.

⚠ Caution for setting
Prevent setting under the monitoring condition because it may cause malfunction and output error.
(Setting instruction under monitoring condition is shown on page D15.)

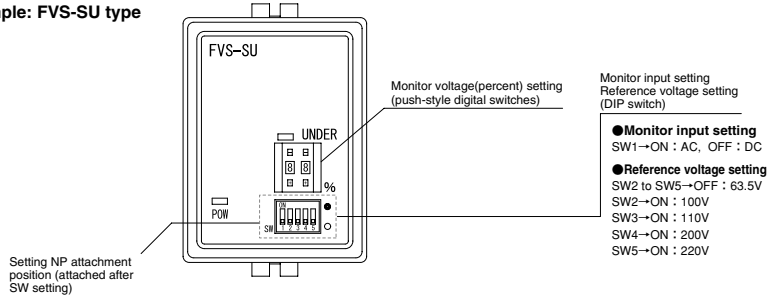
VOLTAGE RELAY

FVS TYPE

INSTRUCTIONS

■How to set monitor voltage (percent-setting type)

Example: FVS-SU type



1 . Monitor input setting

●Select monitor input (AC or DC) by setting No.2 DIP switch.
●Set ON for AC and set OFF for DC.

2 . Reference voltage setting

●Select reference voltage by setting DIP switch No.2, 3, 4 and 5.
●Set all DIP switches OFF for 63.5V, set only No.2 ON for 100V, set only No.3 for 110V, set only No.4 for 200V and set only No. 5 for 220V as reference voltage.
●Voltage range differ from each type. Refer to “DIP switch setting list” on the side of product bodies.

3 . Monitor voltage setting

●Set the value for monitor voltage by setting digital switch.
●Monitor voltage is (reference voltage) – (reference voltage) × (setting voltage : percent).
Example: when reference voltage = 110V and setting value is 80 (%), monitor voltage is 88V.

4 . Voltage label attachment

●Attach each NP for each setting.

⚠ Caution for setting

Prevent setting under the monitoring condition because it causes malfunction and output error.
(Setting instruction under monitoring condition is shown on page D15.)

■How to set monitor voltage (voltage-setting type)

Example: FVS-HDF type

Setting NP

監視入力	DC	監視入力	AC
OVER	0V～99V	OVER	0V～99V
UNDER	0V～99V	UNDER	0V～99V
デジタルスイッチ設定電圧値の70%を表示		デジタルスイッチ設定電圧値の70%を表示	
監視入力	DC	監視入力	AC
OVER	0V～99V	OVER	0V～99V
UNDER	100V～199V	UNDER	100V～199V
デジタルスイッチ設定電圧値の70%を表示		デジタルスイッチ設定電圧値の70%を表示	
監視入力	DC	監視入力	AC
OVER	100V～199V	OVER	100V～199V

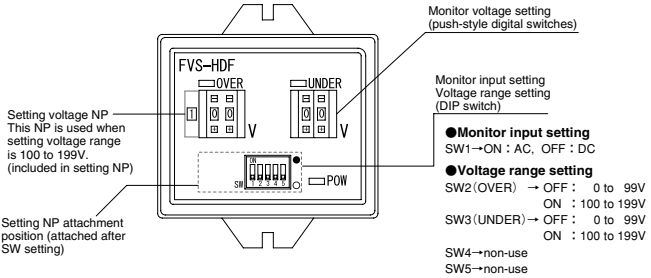
ご注意）
本シールは設定変更時に使用致しますので
大切に保管してください
次のNPは上記表示用にご使用ください



1 . Monitor input setting

●Select monitor input (AC or DC) by setting No.2 DIP switch.
●Set ON for AC and set OFF for DC.

2 . Voltage range setting

●Select voltage range by setting DIP switch No.2 and 3.
●Set No.2 for OVER side voltage range and set No.3 for UNDER side voltage range.
●When each switch is OFF, voltage range is 0-99V. When each switch is ON, voltage range is 100-199V.
●Voltage range differ from each type. Refer to “DIP switch setting list” on the side of product bodies.

3 . Monitor voltage setting

●Set the monitor voltage by setting digital switch.
●Voltage can be set every 1V.

4 . Voltage label attachment

●Attach each NP for setting voltage and each setting.

⚠ Caution for setting

Prevent setting under the monitoring condition because it causes malfunction and output error.
(Setting instruction under monitoring condition is shown on page D15.)

VOLTAGE RELAY

FVS TYPE

TECHNICAL DATA

Polarity of FVS type

There is instruction for polarity as “pin No.1 is + (P) pole and No.2 is - (N) pole”, some users check polarity while wiring. However rectifier circuit is built-in the circuit for control power (Diagram1) and polarity instruction is not necessary.

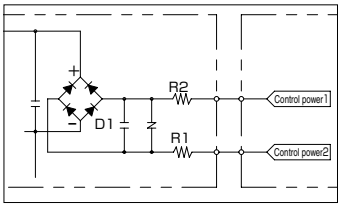


Diagram 1

Setting instruction under monitoring condition

Setting under monitoring condition is not recommended because it may cause malfunction and output error.
If you need to change under monitoring condition, please set by following the right chart.

① Set number “9” of the one's digit.
② Set ten's digit.
③ Set one's digit.

Product life time

We conducted acceleration test (environment test for 5,000 hours) for forecasting product life time in field, and confirmed that problems of components deterioration and functional disorder do not happen.

We calculate 12.9 years for product's life time under 40°C environment. (But this life time differ from actual life time by usage environment changes.)

Frequency characteristic

We conducted operation test by the following frequency other than commercial frequency (50Hz / 60Hz) for monitor input voltage.
Tested frequency: 20 / 40 / 60 / 80 / 100 / 300 / 500 / 700Hz

1) Confirmation of malfunction for rated frequency

Confirm whether operation / reset voltage change and malfunction happens or not when monitor input frequency change between 47.5Hz to 63Hz.
Rated frequency: 50 / 60Hz, Voltage variation : ±5%, Judge range: operation voltage = ±2V, reset voltage = -6V (OV), +6V (UV)

Frequency		Criterion range	Result	Malfunction	Judgement
Rated frequency	50 / 60Hz	Operation ±2V	○ (in Criterion range)	No malfunction	Good
Variation frequency (±5%)	−5% of 50Hz = 47.5Hz +5% of 60Hz = 63.0Hz	Reset OV : −6V UV : +6V			

2) Confirmation of malfunction for out range of rated frequency

Confirm whether operation / reset voltage change and malfunction happens or not when monitor input frequency change from 20Hz to 700Hz.

Frequency	Criterion range	Result	Malfunction	Judgement
Out range of rated frequency (20 to 700Hz)	Reference test	Gap happens from 100Hz between setting voltage and operation voltage	—	Reference

Use as normal excitation condition

Use as normal condition (non-normal excitation) and normal excitation condition are not different for continuous use time, and both of them can be used without problems.
