

CAM-OPERATED SWITCH

FH TYPE

**Highly reliable cam-operated switch
pursuing size reduction and work efficiency**

SPECIFICATIONS (RATINGS, PERFORMANCE, STANDARD OPERATING CONDITION)

STANDARD: NECA C 4520 (2002)
NECA C 4522 (2002)

Item	FH
Rated insulation voltage (UI)	250V
Rated current-carrying capacity (Ith)	15A
Rated supply Voltage of LED part	100/110V DC (−20% to 30%)
Circuit current of LED part	Red : 3mA or less Green : 5mA or less (Both at 110V DC, per lamp)
Max. wire size	2mm ²
Terminal screw size	M3.5 × 8
Insulation resistance	10MΩ or more (500V DC mega)
Withstand voltage	Between pole and ground : 2,000V AC / 1min.
	Between poles : 2,000V AC / 1min.
	Between terminals : 2,000V AC / 1min.
Rated impulse withstand voltage (Uimp)	Between pole and ground : ±4.5kV (1.2/50μs) 3 times
	Between poles : ±3kV (1.2/50μs) 3 times
	Between terminals : ±3kV (1.2/50μs) 3 times
Contact resistance	50mΩ or less (Initial)
breaking capacity	1A (220V AC, Pf=0.3 ~ 0.4)
	1A (110V DC, L/R=40ms) Contact series specifications : 5A
Making capacity	10A (220V AC, Pf=0.3 ~ 0.4)
	1.4A (110V DC, L/R=40ms) Contact series specifications : 7A
Minimum applicable load	AC5V 50mA, DC5V 100mA
Electrical life	Single contact t: 100,000 operations or more Double bridge contacts : 50,000 operations or more
Mechanical life	Single contact : 100,000 operations or more Double bridge contacts : 50,000 operations or more
Shock resistance	500m/s ² 6 directions / 3 times each
Vibration resistance	Vibration : 16.7Hz Vibration : 1.5mm Time : 3 directions / 1 hour
Ambient air temperature	−10~+55°C (No freeze, no dew condensation)
Storing temperature	−20~+60°C (No freeze, no dew condensation)
Relative humidity	20 to 80%
Altitude	2,000 m or less

FEATURES

Improved wiring work efficiency

With the back terminal mechanism, the FH type enables easy mounting and removal of the operating unit body and wiring terminal unit. (Wiring is enabled with the wiring terminal unit only. This structure simplifies wiring work.)

Four models of switches are available in product lineup.

- ① Manual switching type (2 or 3 notches) ② Handle removable type (2 or 3 notches)
- ③ Automatic return push type ④ Automatic return pull type

Manual switching type
(2 or 3 notches)
-Non-illuminated type

Handle removable type
(2 or 3 notches)
-Non-illuminated type

Automatic return push type
Automatic return pull type
-LED illuminated type

Compact body for saving mounting space

Minimum mounting pitches are 42 mm (horizontal) and 65 mm (vertical). The FH type can be mounted in a miniaturized control panel.

Two types of contact mechanisms

Two types of contact mechanisms are available: Single (standard) contact and double-bridge (highly reliable) contact. A desired type can be selected according to the purpose of use.

Terminal cover as standard accessory.

The terminal cover is provided as standard, preventing the user from accidentally touching live parts. (The handle cover is optionally available.)

Circuit indication can be checked at a glance.

Circular and square metal identification plates and bases (flanges) are available. Circuit condition can be directly indicated.

Maximum applicable cable size: 2mm²

Cable of up to 2 mm² can be connected.
(Screw size: M3.5)

FH-B-SP type

INSTRUCTIONS

(1) Panel mounting procedure

To mount the switch to a panel, follow the procedure below.
(To remove the switch, follow the mounting procedure in reverse.)

① Fasten the switch body from the back, and the switch body flange from the front via the mounting panel, and fasten them with the countersunk screws (M4 x 10) included in the product.

② Mount the flange by sliding it diagonally from the front top of the panel. (For LED indication)

③ After hooking the aluminum identification plate in the inner groove of the switch body flange, fasten the panel with the self-tapping screws (M2 x 4) included in the product.

④ After passing the handle through the shaft, fasten it from the bottom with the pan head screws (M3 x 6) included in the product.

(2) Mounting and removal of the terminal

The terminal can be removed from the switch. Follow the procedure below.

① Loosen the screw at the back center of the switch with a flat head screwdriver.

② Pull the terminal lightly backward to remove it.
(To mount the terminal, appropriate tightening torque for the fastening screw is 0.5 N·m.)

(3) LED element replacement

For replacement of the LED element, follow the procedure below. For replacement, use the dedicated tool.

① While sliding the LED flange diagonally to the front top of the panel, raise the panel by pinching it.

② Pinch the existing LED lightly with the dedicated tool, and pull it out to the front.

③ Pinch a new LED lightly with the dedicated tool, and insert it into the socket of the switch.

④ Mount the LED flange by sliding it diagonally from the front top of the panel.

CAUTION: During mounting and removal of the switch and terminal, and replacement of the LED element, make sure that the product is not alive.
